SUMMARY

Entry-level Data Scientist with a strong background in Python, SQL, and Excel, and a good foundation in Power BI. Skilled at data analysis, visualization, and generating actionable insights. Known for strong problem-solving abilities and a passion for leveraging data to drive decision-making.

EDUCATION

Redeemers University **Oct 2021 – August 2025**
B.sc, Computer Science (First Class Honours)

EXPERIENCE

Intraverse Africa **Jun 2024 - Oct 2024**
Internship *physical & remote*

- Performed lead generation, contributing to business growth by sourcing and qualifying potential clients.
- Managed and maintained databases, ensuring data accuracy and integrity.
- Conducted data analysis and created visualizations to support strategic decision-making.
- Utilized web scraping techniques to collect and organize relevant industry data.

PROJECTS

Chelsea FC Premier League Attacking Analysis Dashboard

- Developed an interactive Excel dashboard analyzing Chelsea FC's attacking performance across the first half of the 2025/26 Premier League season.
- Utilized pivot tables and interactive slicers to visualize key metrics including expected goals (xG), shot conversion rates, player cont ributions, and positional analysis.
- Identified performance insights in the team.
- Created multi-dimensional visualizations to examine attacking patterns, defensive contributions from center-backs, and overall team finishing efficiency.

Apple Global Sales Analysis

- Analyzed global Apple product sales data from Kaggle using Python (Pandas) to merge multiple relational tables and perform data c leaning, standardization, and export operations.
- Built an interactive Excel dashboard with pivot tables, slicers, and charts to visualize sales performance across product categories, g eographic regions, and temporal trends.
- Identified key business insights including $22.9M+ total revenue, United States as top-performing market, Tablets as highest-grossi ng category, and seasonal sales patterns with peaks in September-October.
- Performed city-level and yearly performance analysis, revealing 2023 as the highest sales year and identifying major metropolitan a reas as top revenue-generating cities.

Glaucoma Detection Models

- Developed two deep learning models for glaucoma detection using locally sourced retina fundus images using python and pytorch.
- compared ResNet50 and Vision Transformer architectures to optimize accuracy and performance.

Multi-Class Eye Disease Classification

- Built a deep learning model to classify between cataract, diabetic retinopathy, and glaucoma using python.

Football Expected Goals (xG) Model

- Designed an expected goals (xG) model using logistic regression to predict goal-scoring probability using excel and python.

SKILLS

- **Tools**: Python, SQL, Excel, and powerBI
- **Operating Systems**: Windows
- **Soft Skills**: Excellent communication, Team-work
- **Languages**: Fluent in English

CERTIFICATION

Data Science: Python for Data Analysis (Udemy)
